

# Wireless Products General

**I'm having trouble setting the multiverse show ID using RDM. When I access the device's RDM parameters, there is no parameter displayed for show ID when using the Swisson RDM controller.**

The SHoW ID parameter is a manufacture specific parameter. Unfortunately, the Swisson device does not support manufacture specific parameters. You will need to use an RDM controller that supports manufacture specific parameters, such as DMXcat.

Unique solution ID: #1082
