

Dimmer Products

I would like my 5942/5943 dimmer to act as an on/off switch for my Lava Lamp. How would you recommend accomplishing this?

You will need to the following parts:

5942/5943

4 pin automotive relay

DC to AC Inverter

Battery

Lava Lamp

You will need to set the dimmer to Non Dim / 60Hz Inc

You will need to wire the relay as follows

Terminal 85: Goes to the Wireless “+”

Terminal 86: Goes to the Wireless Channel (A,B, C, etc...)

Terminal 87: Goes to the Positive Line of the Inverter

Terminal 30: Goes directly to the Battery Positive (+) terminal

The Negative Line of the Inverter goes right to the Battery (-) Negative terminal
