Dimmer Products

I want to use a 12V LED bulb with my 5942/5943 dimmer. What settings do I need to make this functional?

You will need to set the following dimmer settings
Curve : Square Law (Incan)
Output Response Time : 100ms
Mod. Frequency : 60Hz Incan. (if you have flickering try 1200Hz Candle Mode)

Unique solution ID: #1213
