LED Tape

Looking at the QolorPIX datasheet, it mentions the QolorPix product uses the WS2812B chipset and the FAQ suggests generic compatibility with media servers.

The WS2812B chipset is also listed as compatible with the Madrix Nebula SPI interface.

While this suggests the products will work together, have you or your customers had actual experience pairing the QolorPix product with the Nebula controller?

Yes, you can use the QolorPIX tape with the Nebula controller.
