

DMXcat

Is there any issue with plugging the DMXCat 6000 into a receptacle and using it as the primary DMX controller as a permanent installation?

The DMXCat 6000 is intended to be used as a test tool not as a controller. After 8 hours of nonuse the DMXCat will power down and the lights connected will turn off if they do not have a 'hold last look' option.

Unique solution ID: #1152
